# Business Analytics Project 1
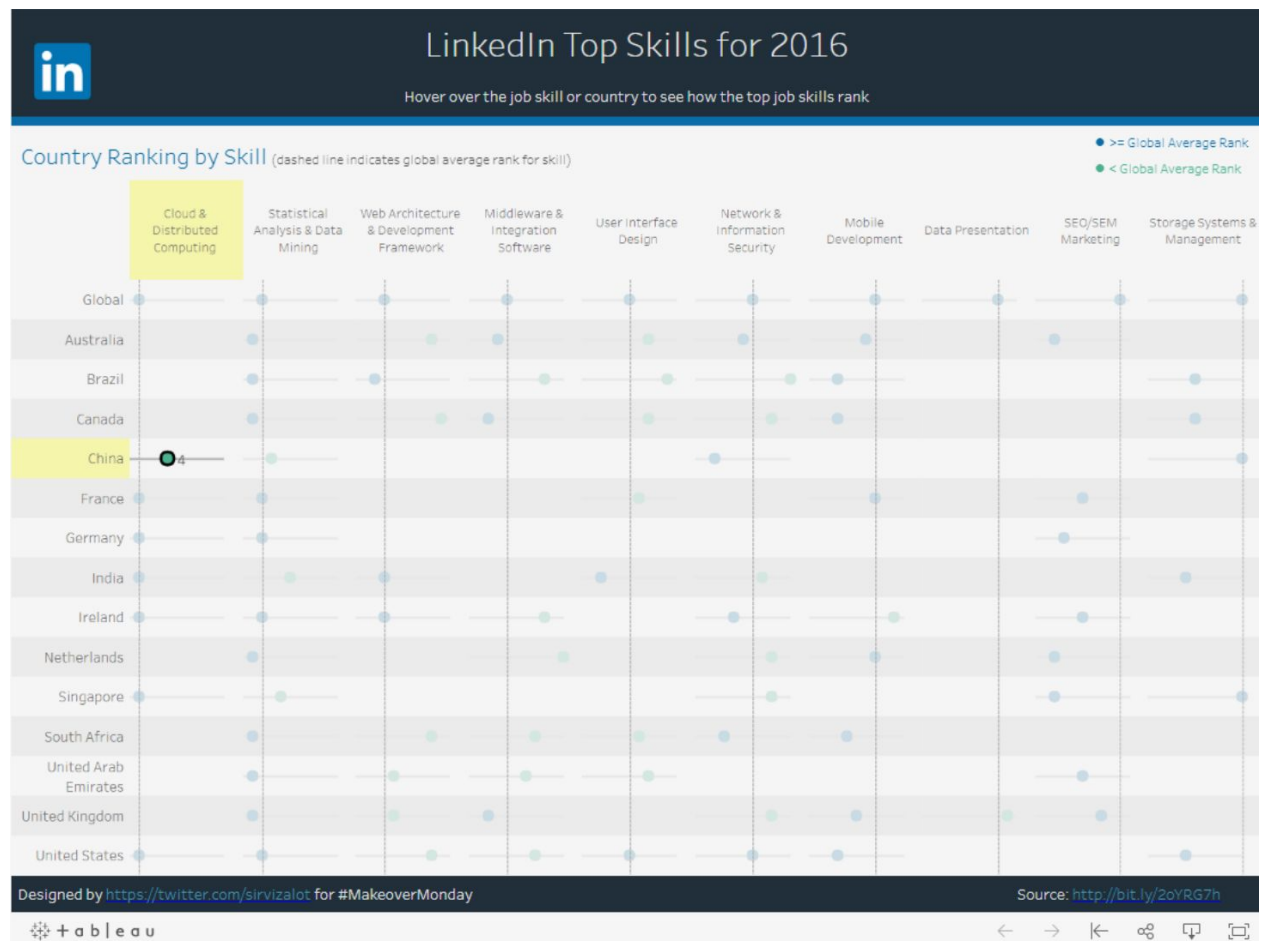

Interpret a Data Visualization

Summary

- ❖ Since data visualization and interpretation of acquired data is important to make others get understanding of the data, the objective of this project is to find three insights from the chosen Visualizations.

- ❖ I have chosen **LinkedIn Top Skills** Dashboard

Insight: 1

From this screenshot, we can assume that Data Presentation skills are only on demand, in United Kingdom. Also, it can be extracted that this skill category is not on demand or there's no data provided, for the rest of countries.

Insight: 2

Another insight that can be extracted from this dashboard is the fact that China is the only country that's below average in terms of Cloud & Distributed skills demand.

Insight: 3

Finally, we can notice in this screenshot, that Analysis & Data Mining is the only skill category that is on demand in all the countries or there's data provided for all the countries.
